

## LEARNING EXPERIENCE BRIEF

# JA Community Coders<sup>®</sup>

### ■ Work and Career Readiness

*JA Community Coders* is a single session that enables early elementary school students to see the importance of digital skills and jobs in the community. This STEM-focused session also allows students to explore and apply the basics of computer programming by participating in a hands-on coding activity.

## CURRICULUM OUTLINE

### Warm-Up: Digital Tools and Skills

Students review examples of digital tools and skills that workers may use in a community and are introduced to computer coding basics.

### Activity: Bots and Bugs

Students explore coding and create simple code sequences. Activities are available at three different difficulty levels; educators should implement the activity level that is best aligned with students' abilities and prior knowledge. Each activity provides a no-technology adaptation.

- **Introductory** – Students use commands to navigate a robot through a maze.
- **Basic** – Students translate a story about a robot into a sequence of commands.
- **Intermediate** – Students evaluate an existing program's code to determine where the errors are. Then they look for ways to make the program more efficient.

### Wrap-Up

Students discuss the ways in which digital skills and tools can benefit a community. Then they write a sentence about a digital skill they'd like to start using.

## LEARNING EXPERIENCE HIGHLIGHTS

- Is appropriate for students in first through third grades.
- Can be delivered as a stand-alone learning experience or as a supplement to *JA Our Community*<sup>®</sup>, *JA Our Families*<sup>®</sup>, or *JA Our City*<sup>®</sup>.
- Introduces STEM and digital skills through a hands-on coding activity.
- Easily adapts for different options based on the learning environment for implementation, student access to technology, and students' prior experience with technology.
